FCAR F9S

NEW DIAGNOSTIC PLATFORM

Diagnostic center in one device

FCAR F9S combines an efficient tablet, automatic vehicle recognition and fast controller scanning in the form of a clear topology. Support for DoIP and CAN-FD protocols prepares the workshop for diagnostics of the latest car platforms.

1

DOIP AND CAN-FD

Support for modern communication protocols used in new vehicles.

2

OVER 130 BRANDS

Supports vehicles of European, Asian and American brands.

3

FCARLINK VCI

A modern communication module equipped with its own display.

4

AUTOSCAN

Automatic vehicle recognition and presentation of controllers in the form of topology.

DIAGNOSTICS IN PRACTICE

How does the FCAR F9S work?

Transparent diagnostic process - from connecting to the vehicle, through scanning controllers, to data analysis and execution of available service functions.

01 - CONNECT

Connect the FARLINK VCI module to the vehicle.

02 - SCAN

Recognize your vehicle and check available drivers.

03 - DIAGNOSE

Analyze errors and run available service procedures.

DIAGNOSTIC DATA IN REAL TIME

1

OBD II DIAGNOSTICS

Reading diagnostic information from vehicle systems.

2

NETWORK TOPOLOGY

Clear presentation of drivers and their current status.

3

SPECIAL FEATURES

Access to service procedures, adaptations and resets.

4

DPF REGENERATION

Support for forced particulate filter regeneration.

FCAR F9S

Ready for a new level of diagnostics?

FCAR F9S is a comprehensive diagnostic solution that combines mobility, advanced service functions and reliability in one device.

Increase the efficiency of your workshop and outshine the competition.
